

"DON'T LET ANYONE LOOK DOWN ON YOU
BECAUSE YOU ARE YOUNG. BE AN EXAMPLE TO
ALL BELIEVERS IN WHAT YOU SAY, IN THE WAY
YOU LIVE, IN YOUR LOVE, YOUR FAITH AND YOUR PURITY."
I TIMOTHY 4:12

THE SUNRISE CURRICULUM

## Strategies for supporting pupils with Special Educational Needs and Disabilities in Music lessons.

## Attention Deficit Hyperactivity Disorder Allow children time to let out their impulsiveness when handling new instruments, these may be introduced prior to the lesson so that they become familiar. Altention Meet the child's need for physical activity and plan music lessons with a range of moving and hands-on (kinaesthetic) learning activities. Help children to manage their arousal levels, but allow children 'time out' when they show they are in need of a break from the lesson. Allow children time to let out their impulsiveness when handling new instruments, these may be introduced prior to the lesson so that they become familiar. A 'stress ball' or other fiddle object agreed by the SENCO

	may help children concentrate and stop them using
	musical instruments inappropriately during a lesson.  Reward children for joining in and completing tasks, both individually and as part of a group.
	Sit the child where they feel most comfortable during the
Anxiety	<ul><li>lesson.</li><li>Let the child know who is there to support them. This</li></ul>
J	may be a particular friend, group of friends or an adult.
	Be aware that anxious children may not have the
	confidence to perform in front of others.
	<ul> <li>Learn to spot a child's triggers, and what the child looks like in a heightened state of anxiety.</li> </ul>
Autism	Keep daily routines (e.g., seating plans) as normal as
Spectrum	possible and consult the child beforehand if there is
Spectrum	going to be a change - give the child options to choose
Disorder	<ul><li>from in this case.</li><li>Allow time to process information, and don't put the child</li></ul>
	on the spot by asking questions publicly, unless you
	know they are comfortable with this.
	Be aware that a child with autism is likely to experience
	sensory processing difficulties where they may be either
	over-responsive or under-responsive to sensory stimuli
	e.g., singing or noises and sounds from instruments.
	Allow children to have planned and unplanned sensory  have the sensory
	breaks or use fiddle toys that won't disrupt other children
	<ul> <li>when necessary.</li> <li>Pupils may struggle to work in a group and prefer to</li> </ul>
	work on their own due to communication difficulties.
	<ul> <li>Prepare the child for what is coming-picture cues and</li> </ul>
	discussing what the lesson will be like is helpful.
	Replace passive teaching methods with experiential
Decombach	learning for children- 'doing' will bring more interaction
Dyscalculia	and success than just 'watching'.
	Allow children to demonstrate and teach what they can
	do to others.
	Pastel shades of paper and backgrounds will reduce
Duslovia	'glare' when reading music or following musical
Dyslexia	notations.
	Use large font sizes and double line spacing where
	appropriate.

	Avoid 'cluttered' backgrounds with lots of unnecessary
	images.
	Ensure children have a large enough space to work in.
	Allow children extra time to practise, with movement
Dyspraxia	breaks where needed.
J	Don't choose these children to go first s they may need to
	pick up on cues from other children in order to process
	how to do something correctly.
	Pair children with a sensitive partner who knows what
	they're doing.
	Clearly demonstrate how to handle equipment, and don't
	draw attention to the awkwardness of their movements.
	Prior to the lesson, ask the child where they'd prefer to
	sit.
Hearing	If they have hearing loss in only one ear, make sure they
	have their good ear facing the teacher where applicable.
Impairment	Discreetly check if the child is wearing their hearing aid.
	Clearly demonstrate or play sounds that are loud enough
	to hear. Repeat any questions asked by other students
	in the class before giving a response, as a hearing-
	impaired child may not have heard them.
	Remove all barriers to lip-reading. Make sure the child
	can clearly see the teacher.
	Share the lesson using a laptop with headphones or
	other assistive technology.
	Provide lists of subject-specific vocabulary or song lyrics
	which children will need to know, as early as possible.
	Sit children close to the door so they may leave the room
Tailakin a laawaa	discreetly to go to the toilet and not draw attention to
Toileting Issues	themselves. Use toilet passes or prior permission as
	applicable.
	Be aware that anxiety associated with public music
	performances may trigger pain or a need to go to the
	toilet.
	When a school trip or concert is coming up, talk to the
	child and parents about specific needs and how they can
	be met.
Cognition and	Work will be carefully planned and differentiated, and
Y.	broken down into small, manageable tasks.
Learning	Use picture cards and visual prompts to remind them
Challenges	what to do and keep children on track.
<b>J</b>	Physically demonstrate what to do rather than just rely

	an unchalinateriation o
	on verbal instructions.
	Avoid children becoming confused by giving too many
	instructions at once. Keep instructions simple and give
	specific, targeted praise so children know exactly what
	they are doing well.
Speech,	Be aware of the level of language that children are
	using, and use a similar level when teaching to ensure
Language x	understanding.
Communication	Use signs, symbols and visual representations to help
Noods	children's understanding and ability to follow a piece of
Needs	music with different notes or instruments.
	Respond positively to any attempts pupils make at
	communication s not just speech.
	Provide opportunities to communicate in a small group
	and be fully involved in the activity.
	Use non-verbal clues to back-up what is being said
	e.g., gestures.
	Be aware that tics can be triggered by increased stress,
Tourntto	excitement or relaxation s all of which may be brought
Tourette	on by music.
Syndrome	Ignore tics and filter out any emotional reaction to them.
J	Instead, listen and respond with support and
	understanding.
	Manage other children in the room to avoid sarcasm,
	bullying or negative attention being drawn to a pupil's
	tic.
	Avoid asking a child <i>not</i> to do something, otherwise it
	may quickly become their compulsion. Instead, re-
	demonstrate how to do something correctly.
	Be sensitive to how noises x music affects a pupil's
	sensory processing capabilities. Find out what does and
	does not lead to a positive response and work with these
	in mind.
	Understand behaviour in the context of the individual's
Experienced	past experiences.
Experienced	Always use a non-confrontational, trauma informed
Trauma	approach that shows understanding and reassurance,
	using playfulness, acceptance, curiosity and empathy.
	Actively ignore negative behaviour. Praise good
	behaviour and reward learning.

	<ul> <li>Incorporate opportunities for humour and laughter in music lessons (laughter reduces the traumatic response in the brain).</li> <li>Adults to support and coach traumatised children in ways to calm themselves and manage their own emotions.</li> <li>Allow children the use of a pre-agreed breakout space when something in the classroom triggers an emotional outburst.</li> </ul>
Visual Impairment	<ul> <li>Sit children where they have the best view of the teacher and the board/resources.</li> <li>To help children who are sensitive to light and glare, use window blinds and screen-brightness controls to regulate the light in the room.</li> <li>Add more light to an area if necessary.</li> <li>Children may benefit from high-contrast objects and pictures.</li> <li>Ensure children wear their prescribed glasses.</li> </ul>
