

Joining the Letter 'q'

The letter 'q' joins onto other letters using a descender diagonal join. It is the only lower case letter that joins in this way. The flick of the 'q' needs to come back up past the baseline to join onto the next letter. Practise it here:

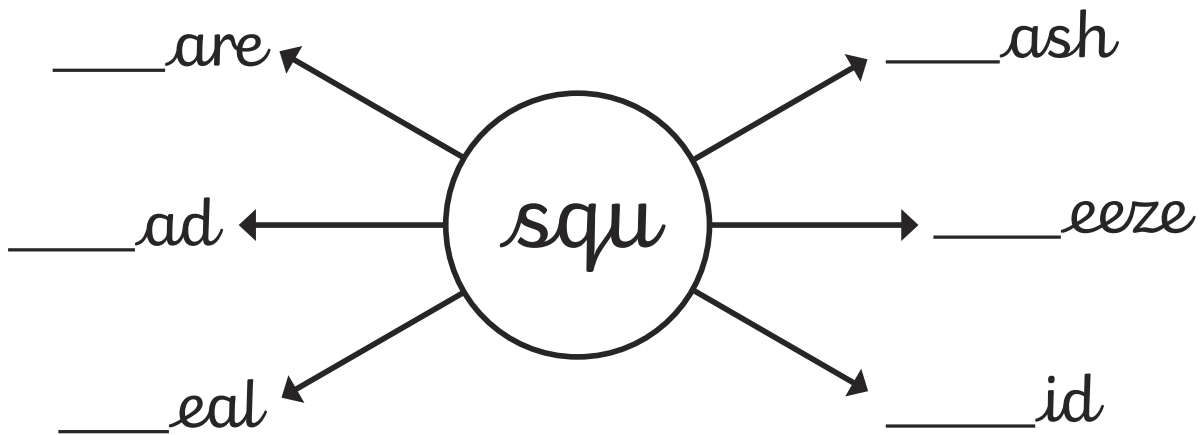

qq

qp

qg

qu

Add the 'squ' letter pattern to these words.

Can you copy these lines of words with different joins from 'q'?

liquid

burqa
