

Greetings, Scientists.

This week I am going to ask you to use the internet to find out about the dangers of smoking. As I'm sure you know, this habit has many unpleasant consequences. I would like you to make an information page, with scientific effects of smoking as an ANTI SMOKING POSTER.

So "Smoking isn't cool" is NOT scientific, so don't include it in your poster.

However, "nicotine stains skin an orange-brown colour" is a scientific fact, so, yes, you can use it.

As this is part of or circulation unit, it is super important to think about smoking's effects on hearts, lungs and blood.

Here's a random scientific fact to get you started: 'smoking involves pulling smoke into your lungs. Smoke contains carbon dioxide (CO₂) which is a waste product we are trying to get *out* of our body, and Carbon Monoxide, (CO) which is a strong poison, both pollute the air and both pollute our bodies'.

As it's a poster, make it visually appealing and make sure it attracts the reader's attention.

Here's a great font I like to use. You may choose anything you like or complete it by hand if you prefer.

SMOKING KILLS
